MAISON LUMEN · ORACLE EPM PLANNING (EPBCS)

Solution Design Document

Lumen Plan: driver-based forecast and FY27 budget for the French sites

Project	Oracle EPM rollout (Lumen Rollout) · Planning workstream
Document	LR-DES-EPBCS-001 · version 1.0 · approved
Date	15 May 2026 (design sign-off)
Prepared by	Gaurav Sharma, EPM consultant
Approved by	Marc Dubois, CFO and project sponsor

Portfolio sample. Maison Lumen, its people and all figures are fictional. Oracle and EPBCS are trademarks of Oracle Corporation; this document is not affiliated with Oracle.

Document control

Document ID	LR-DES-EPBCS-001
Status	Approved at the design sign-off (steering committee, 15 May 2026)
Scope	Oracle EPM Planning application for Maison Lumen SAS: sites of Lyon, Paris and Lille
Related documents	Project Initiation Documentation (LR-PID-001) · FP&A workshop minutes (30 March to 24 April 2026) · Consolidation design (LR-DES-FCCS-001) · Project control workbook (UAT test plan)

Version history

Version	Date	Author	Changes
0.1	24 Apr 2026	G. Sharma	First draft after the four FP&A design workshops
0.5	6 May 2026	G. Sharma	Review comments from FP&A and IT; head-office allocation key changed from revenue to headcount (DD-03)
1.0	15 May 2026	G. Sharma	Approved at the design sign-off (milestone M2)

Review and approval

Role	Name	Decision	Date
Paris site controller, FP&A key user	Claire Martin	Reviewed	12 May 2026
Head-office controller, Lyon	Sophie Bernard	Reviewed	12 May 2026
IT and ERP lead	Nicolas Petit	Reviewed	13 May 2026
CFO, project sponsor	Marc Dubois	**Approved**	15 May 2026

1. Introduction

1.1 Purpose

This document describes how Oracle EPM Planning is configured for the forecast and budget process of Maison Lumen SAS. It turns the requirements gathered in the FP&A workshops into a design that the build team configures and the key users test against. Once approved, any change to it goes through the project's change control.

1.2 Scope

In scope	Out of scope (phase 2 or another workstream)
Monthly rolling forecast of the current year (FY26)	Employee-level workforce planning (request CR-05, phase 2)
FY27 budget with submission and approval by site	Capital expenditure, balance sheet and cash-flow planning
Driver-based revenue and payroll, head-office cost allocation	Subsidiaries in the UK, the US and India (consolidated in FCCS)
Monthly load of actuals from the ERP	Integration with the payroll system
What-if simulation and variance analysis	Management reporting packs (Narrative Reporting)

1.3 Planning calendar

Cycle	Frequency	Horizon	Key dates
Rolling forecast	Monthly, after the ERP close	Current year: closed months as actual, the rest forecast (8+4 in September)	Actuals loaded on working day 3, forecast updated days 5 to 8, CFO review day 10
Budget FY27	Yearly	12 months of FY27	Launch at the EPBCS go-live (2 November 2026), submission by 27 November, approval by 11 December

1.4 Glossary

Term	Meaning
Driver	An operational quantity (units, price, headcount, salary) from which amounts are calculated
Planning unit	A site's budget, which moves through the approval workflow as one block
Substitution variable	An application-wide value (for example the closed months) used by forms and rules
Business rule	A calculation script run on save or on demand (for example revenue = units × price)
Working / Final	The editable version of a plan, and its frozen copy once approved
Dense / sparse	Storage setting: dense dimensions are mostly filled (accounts, months), sparse ones are not

2. Requirements and traceability

The requirements come from four FP&A workshops held between 30 March and 24 April 2026. Each one is traced to the design section that answers it, and to the user acceptance test (UAT) case that proves it in the project control workbook.

ID	Requirement	Priority	Design	UAT
REQ-01	Forecast the current year monthly, keeping closed months as actuals	Must	4.4, 7.3	U08
REQ-02	Build revenue from units sold and the average selling price of each site	Must	6	U01, U02
REQ-03	Calculate payroll from headcount and average salary, with the 13th month in December	Must	6	U03
REQ-04	Allocate Lyon head-office costs to the Paris and Lille sites	Must	6	U04
REQ-05	Enter an annual total and spread it over the months	Should	5.2	U05
REQ-06	Submit and approve each site's budget, keeping a frozen approved version	Must	8	U06
REQ-07	Simulate what-if scenarios without changing the plan	Should	5.3	U07
REQ-08	Load monthly actuals from the ERP and reject unmapped accounts	Must	7	U16, U17
REQ-09	Compare forecast, budget and actuals, with a price, volume and mix analysis	Must	10	U20
REQ-10	Restrict each site controller to their own site	Must	9	U23, U24
REQ-11	Keep an audit trail of changes and comments by cell	Should	5.4	U06
REQ-12	Provide a CFO dashboard	Could	10	U22

Prioritisation

Priorities use MoSCoW: **Must** items are required for the go-live, **Should** items are expected but could move to a later release, **Could** items are included only if time allows.

3. Solution overview

One Oracle EPM Planning application holds actuals, the rolling forecast and the budget of the three French sites of Maison Lumen SAS. Actuals come from the ERP every month; site controllers plan drivers and costs in forms; business rules calculate revenue, payroll and the head-office allocation; the CFO approves each site's budget, which freezes a Final copy.

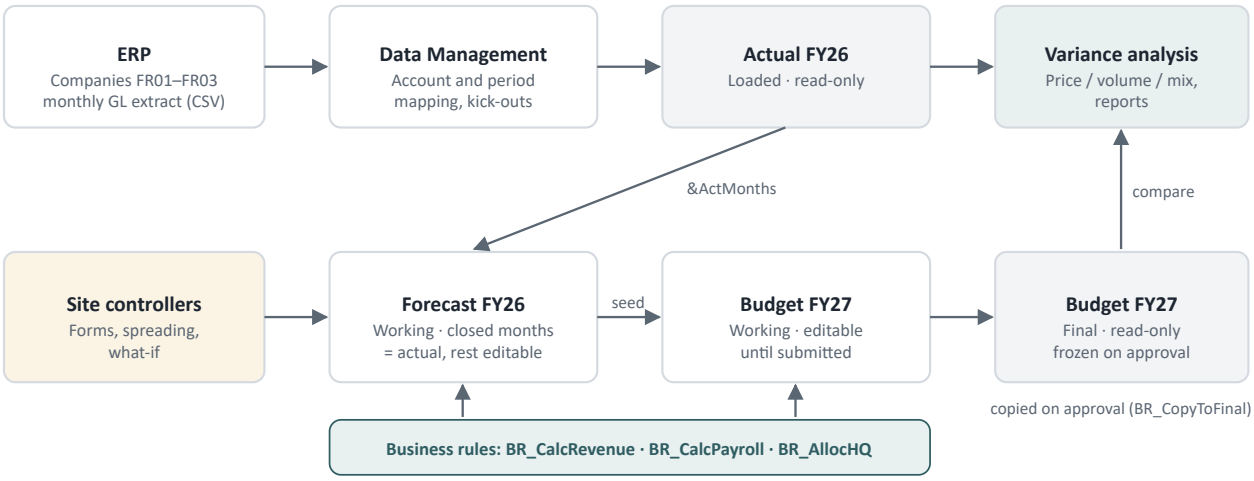

Figure 1. Data flow of the planning solution

- **Actuals.** The ERP's monthly general-ledger extract is mapped to planning accounts and loaded into Actual FY26.
- **Forecast.** Closed months of Forecast FY26 take the actuals (substitution variable &ActMonths); open months are planned.
- **Budget.** Budget FY27 Working is seeded from the forecast, planned by each site, then approved and copied to Final.
- **Analysis.** Variance analysis compares any two plans, with revenue split into price, volume and mix effects.

4. Application design

4.1 Dimensions

The application uses the six dimensions that every EPM Planning application requires, plus a Plan Element dimension that records where each amount comes from. The Currency dimension is not enabled: all three sites report in euros.

Dimension	Members (examples)	Storage	Notes
Account	UNITS, PRICE, 706, 607, MB, HC, SAL, 641, 645, 61, 62, 63, ALLOC, EBE, 681, REX	Dense	French chart-of-accounts codes; subtotals are dynamic calculations
Period	Jan to Dec, Q1 to Q4, YearTotal	Dense	Quarters and year total are dynamic calculations
Entity	Total entities > LYO, PAR, LIL	Sparse	Each site is a workflow planning unit
Years	FY26, FY27	Sparse	Kept apart from Period so every year reuses the same months
Scenario	Actual, Budget, Forecast	Sparse	Actual is read-only, loaded from the ERP
Version	Working, Final	Sparse	Final is read-only and filled on approval
Plan Element	Loaded, Calculated, Input	Sparse	Loaded from the ERP, produced by rules, or entered in forms

4.2 Account structure

Code	Account	Type	Storage	Source or formula
UNITS	Units sold	Driver	Stored	Input by sales sites; whole number
PRICE	Average selling price (€)	Driver	Stored	Input; two decimals
706	Revenue	Revenue	Stored	BR_CalcRevenue: UNITS × PRICE
607	Cost of purchases	Expense	Stored	Input
MB	Gross margin	Revenue	Dynamic	706 − 607
HC	Average headcount (FTE)	Driver	Stored	Input; one decimal
SAL	Average monthly gross salary (€)	Driver	Stored	Input
641	Gross salaries	Expense	Stored	BR_CalcPayroll
645	Social charges	Expense	Stored	BR_CalcPayroll: 641 × 42 %
61	External services (rent, energy)	Expense	Stored	Input
62	Other external services	Expense	Stored	Input
63	Taxes and duties	Expense	Stored	Input
ALLOC	Head-office cost allocation	Expense	Stored	BR_AllocHQ
EBE	EBITDA	Revenue	Dynamic	MB − 641 − 645 − 61 − 62 − 63 − ALLOC
681	Depreciation	Expense	Stored	Input
REX	Operating result	Revenue	Dynamic	EBE − 681

Expenses are entered as positive amounts; the account type decides whether a variance is favourable. The head office (LYO) has no sales, so its forms hide UNITS, PRICE, 706, 607 and MB.

4.3 Entities and planning units

Entity	ERP company	Role	Planner
LYO	FR01	Lyon head office: cost centre, no sales; its costs are allocated to the sites	Sophie Bernard
PAR	FR02	Paris: sales site	Claire Martin
LIL	FR03	Lille: plant and sales site	Thomas Leroy

4.4 Scenarios and versions

Plan	Content	Access
Actual FY26	Loaded from the ERP every month	Read-only
Budget FY26	Approved last year; reference for FY26 variances	Read-only
Forecast FY26 · Working	Closed months equal to actual; open months planned	Open months editable
Budget FY27 · Working	Seeded from the forecast, planned by each site	Editable until submitted

Plan	Content	Access
Budget FY27 · Final	Frozen copy of each approved site	Read-only

4.5 Substitution variables

Variable	Meaning	Value at 25 Sep 2026	Updated by
&ActMonths	Closed months of the current year	Jan to Aug	Month-close procedure
&FcstMonths	Open forecast months	Sep to Dec	Month-close procedure
&CurYr	Current year	FY26	Administrator, once a year
&BudYr	Budget year	FY27	Administrator, once a year

5. Forms and data entry

5.1 Forms

Form	Purpose	Layout	Editable cells
F01 Driver-based P&L	Enter forecast and budget drivers and costs	Rows: drivers then P&L lines · columns: months and year total	Input accounts in open months
F02 Top-down spreading	Spread an annual total over the open months	One account, total then months	The total
F03 What-if simulation	Test changes in volume, price, costs and salaries	Five levers against key results	The levers only
F04 Variance analysis	Compare two plans, with price, volume and mix	Accounts × current, reference, variance	None (read-only)
F05 Workflow dashboard	Status, blockers and approvals by site	One card per site	Actions by role

5.2 Spreading methods

- **Seasonality of the reference plan** (default): the total follows last year's monthly profile.
- **Proportional**: the total follows the current monthly values.
- **Even**: the same amount in every open month.
- Rounding differences go to the largest months, so the months always add up exactly to the total entered.

5.3 What-if simulation

Lever	Range	Effect
Units sold	−20 % to +20 %	Applied to volumes and to purchases
Selling prices	−10 % to +10 %	Applied to the average selling price
Unit purchase cost	−10 % to +15 %	Materials and components inflation

Lever	Range	Effect
Average salaries	−5 % to +10 %	Social charges recalculated in turn
External services	−15 % to +15 %	Accounts 61 and 62 (rent, energy, fees)

A simulation never changes the plan by itself. The planner can publish it to the open months of the forecast, or to the budget of sites still in draft; the published changes then appear in the audit trail.

5.4 Validation rules and audit trail

Rule	Applies to	Severity	Message
V01	All input cells	Error	Not a number
V02	All input accounts	Error	Negative amounts are not allowed on this account
V03	PRICE, SAL	Error	Value must be greater than zero
V04	UNITS	Error	Units must be a whole number
V05	All input accounts	Warning	Change of more than ±50 % against the reference plan for the same month

Errors block saving. Warnings are shown on the cell and can be justified with a cell comment. Every saved change is logged with its author, time, old and new value, and source (form, spreading, simulation or import).

6. Business rules

Rules run automatically when a form is saved (for the planning unit being edited) and can also be launched from the rules page. On the forecast they only touch open months; on the Working budget they cover the whole year.

Rule	Trigger	Scope	Logic
BR_CalcRevenue	On save; on demand	Sales sites (PAR, LIL)	706 = round(UNITS × PRICE)
BR_CalcPayroll	On save; on demand	All sites	641 = HC × SAL, doubled in December (13th month); 645 = 641 × 42 %
BR_AllocHQ	After payroll; on demand	LYO to PAR and LIL	Pool = LYO 61 + 62 + 63 + 641 + 645; PAR receives pool × HC(PAR) / (HC(PAR) + HC(LIL)); LIL the rest; LYO ALLOC = − pool
BR_CopyToFinal	On budget approval	The approved site, FY27	Copy every stored account from Working to Final

Rule order and stale data

Revenue and payroll run before the allocation, because the allocation uses the head office's payroll. If a driver changes and a rule has not run since, the form shows the calculation as out of date and the site cannot submit its budget until the rules are run again.

7. Data integration

7.1 Source file

Each month the ERP produces one semicolon-separated file per company (FR01, FR02, FR03) with the columns company, account, label, period (YYYY-MM) and amount, using a decimal comma. Statistical accounts carry units sold and headcount.

7.2 Account mapping

ERP account	Description	Planning account	Sign
706*	Sales of finished goods	706	Reversed (credit)
607*	Purchases of goods	607	As loaded
606*, 613*	Energy and supplies; rent	61	As loaded
622*, 625*, 626*	Fees; travel; telecoms	62	As loaded
635*	Taxes (CFE)	63	As loaded
641*	Salaries and bonuses	641	As loaded
645*	Social security and pension	645	As loaded
681*	Depreciation	681	As loaded
STAT_UNITS	Statistic: units sold	UNITS	As loaded
STAT_HC	Statistic: FTE headcount	HC	As loaded

Accounts without a mapping are rejected (kick-outs) and listed for correction; the load is run again once the mapping is updated. The period column maps to the Period and Years dimensions.

7.3 Month-close procedure

1. Load the month's actuals and check that no line was rejected.
2. Reconcile the loaded totals with the ERP trial balance, company by company.
3. Close the month: its actuals replace the forecast, the month locks, and &ActMonths moves on one month (8+4 becomes 9+3).
4. Site controllers update the remaining forecast months before the CFO review.

8. Workflow and approvals

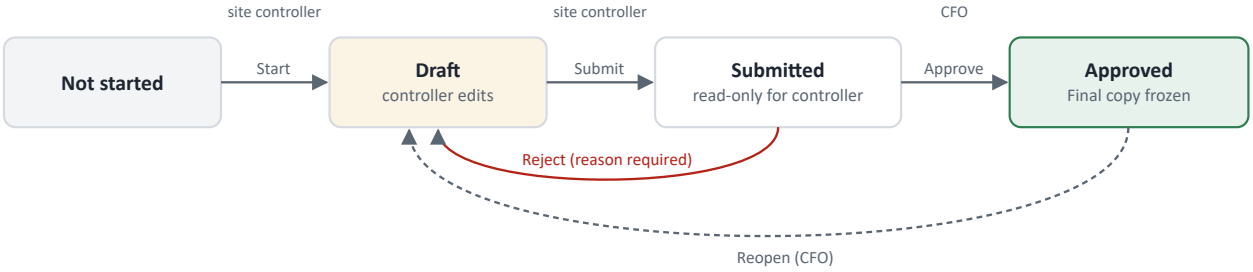

Figure 2. Budget approval workflow for each site (planning unit)

Each site's FY27 budget is a planning unit. The site controller starts it, plans and submits; the CFO approves it, or rejects it with a mandatory reason, which sends it back to draft. Approval runs BR_CopyToFinal and locks the site. Only the CFO can reopen an approved site.

Checks before submission

- No unsaved changes in the site's forms
- Revenue and payroll recalculated since the last driver change
- Head-office allocation run after the last payroll change
- No validation errors (V01 to V04)

9. Security

Role	Who	Access
Service administrator	EPM consultant during the project, then IT support	Full administration of the application
Power user	FP&A lead	All sites; runs rules, closes months, maintains substitution variables
Planner	Site controllers: Sophie Bernard (LYO), Claire Martin (PAR), Thomas Leroy (LIL)	Write access to their own site; read access to Total entities
Approver	CFO (Marc Dubois)	Read access to all sites; approves or rejects budgets
Viewer	Management committee	Read-only access to reports and variance analysis

Access is granted to groups (for example LP_Planner_PAR), never to named users, so a change of controller only means changing group membership. Security is tested in the test environment before production (UAT cases U23 and U24).

10. Reporting and analysis

Three comparisons are available: forecast FY26 against budget FY26, actual against budget FY26 (year to date), and budget FY27 against forecast FY26. Each is available by site or for the total, by quarter or for the year.

Effect	Formula (calculated by site, then added up)
Volume	(units in the plan − units in the reference) × reference price
Price	(price in the plan − reference price) × units in the plan
Mix	At total level: sum of the site volume effects − the total volume effect at the average reference price

A CFO dashboard with the main indicators by site completes the reporting (REQ-12).

11. Non-functional requirements

Area	Requirement
Performance	Forms open in under 3 seconds; rules for one site run in under 30 seconds
Oracle updates	Oracle updates test environments on the first Friday of each month and production on the third; regression tests run in between
Backup	Oracle's daily maintenance snapshot, plus an application snapshot before each release to production
Audit	Cell history and comments kept for the life of the application
Naming	Rules BR_*, forms F0x, security groups LP_<role>_<site>, variables &Name

12. Design decisions

ID	Decision	Rationale	Alternative rejected
DD-01	Revenue = units × average price, by site	Matches how sales teams plan, and explains variances by volume and price	Revenue entered directly: no volume or price view
DD-02	Payroll from average headcount and salary, 13th month in December	Accurate enough by site, with no personal data in the tool	Employee-level planning: moved to phase 2 (CR-05)
DD-03	Head-office costs allocated by headcount	Simple, stable and agreed by the site controllers	Allocation by revenue: penalises growing sites
DD-04	Final version filled by copy on approval	Keeps a frozen reference for variances and audit	Approval in place: no frozen copy
DD-05	Forecast horizon moved by substitution variables	The same forms work every month, with no redesign	One form per month: heavy to maintain
DD-06	Single currency (EUR), no Currency dimension	All three sites report in euros	Multi-currency: not needed here; subsidiaries are in FCCS

Sign-off

This design was approved by the steering committee on 15 May 2026 (milestone M2, decision log). Any change after sign-off goes through change control.
